

# ECO-play<sup>®</sup>

Mini village

## Types of wood used

### Robinia

Robinia (durability class I to II) is the most durable European wood type that exists.

#### DESIGN

Robinia wood is characterised by its natural appearance. The shape of this deciduous tree is important for these playground equipment because the wood has a natural curve which is appealing to children.

Promoting  
Sustainable Forest  
Management  
[www.pefc.org](http://www.pefc.org)

### Larch

Larch (class III) is a type of wood with very little sapwood and a durable heart, ideal for use in outdoor applications. This type of timber does not come in direct contact with the ground but is used for finishing the roofs and floors.

Larch is a durable type of wood that can be used without any treatment.

## Used materials

### Paint

Some parts are being coloured. At Eco-Play we only use ecological waterborne paints.

### Ropes

Eco-play's ropes and net constructions are made of vandalism resistant steel cables. These consist of an interweaving of thin galvanised steel wires.

### Metal

With the exception of fixations, the metal used at Eco-play is stainless steel.

### Anchorage (A/B)

- A – The robinia beams are installed directly into the ground.
- B – The product is fixed on a paved surface by means of brackets

Products without the reference "A/B" should always be installed into the ground by means of a concrete foundation.
